

REMARKS

Applicants acknowledge with appreciation the allowance of the application.

When allowing the application, the Examiner added a new, more descriptive title by Examiner's Amendment. The new title is informal in that it unnecessarily includes the word "with" and is incomplete in that it omits the word "plate." A corrected version of the Examiner's new title has been submitted herewith to correct these deficiencies.

When reviewing the allowed claims, an informality has been noted in claim 29. As allowed, the claim includes the wording "...to enable an observer from to view the display information from the first side of the liquid crystal panel." The first occurrence of "from" in the afore-quoted language is in error and has been deleted by the present amendment. As amended, the language correctly reads as "...to enable an observer to view the display information from the first side of the liquid crystal panel."

The correction of the title and the correction of claim 29 are necessary to correctly describe and claim the invention. These corrections are formal in nature and do not alter the scope of the claims in any manner. To ensure that the title and claim 29 are correct, entry of the present amendment is respectfully requested.

Consideration and entry of this amendment will not impose an undue burden for the Examiner or the PTO staff, and entry of the amendment is necessary to ensure correctness of the resultant patent.

In view of the foregoing, favorable consideration and entry of this amendment are respectfully requested.

Respectfully submitted,
